Genesis Middleware

Advanced Technologies Streamlining the way you do day-to-day tasks

Genesis is a middleware development platform that encapsulates SymXChange making it easier and more efficient when building sophisticated applications that extend the functionality of the core. Genesis supports JSON requests from calling apps interfacing directly with the Core. Here are a few solutions built on the power of Genesis:

Genesis FPS with OFAC Force - OFAC Force provides for on-demand and batch OFAC screening.

Genesis Ignite - Ignite provides integration of FIS products Qualifile (ChexSystems), Identity Verification (IDV), Identity Authentication (IDA) and OFAC watch.

Genesis Ignite Plus - Ignite Plus provides seamless integration of FIS BizChex into Episys core. Dovelink Business is the ONLY certified vendor with this capability..

Genesis JHA Wire Integration - Easily integrate OFAC screening of wires and enforce custom wire business rules within the JHA Wire module.

Genesis ACH/Bill Payment - Originate ACH transactions or enhance the member experience with easy to manage bill payments.

Genesis Unique IDs - Manage up to 36 alpha-numeric unique IDs for members for a variety of needs defined by other third parties.

Executive Dashboards - Obtain important information needed to make ongoing decisions with custom dashboards pulling in near "real-time."

Calyx Mortgage Integration - Book and fund loans directly from the Calyx Platform within the core using a single button click. Available for PATH and Point interfaces.

Formlocity - Manage electronic documents for stand-alone forms, batch letters, marketing material and notices without the hassle of antiquated methods in Episys.
